

A Two Days Training Programme for

EMS - Internal Auditors

29th and 30th, September, 2009,

at Hall No. 2, 5th floor, A-Wing, MCCIA. ICC Complex, S.B. Road, Pune 16

Introduction

Environmental issues in the recent past were neglected to a great extent due to the lack of awareness, technologies, investment in waste not being the culture, zero returns, misleading concepts of science and economic evaluations and many such other aspects. However, with the growing need of time for effective compliance, thanks to the stringent regulatory framework and implementation by the State Pollution Control Board initiatives, environmental issues are now taken up much more seriously at industrial level.

However, with the growing awareness and need for effective compliance also substantiated with the augmentation of multinationals in and around the State of Maharashtra, there seems to be need for understanding the objectives of ISO 14001.

This ISO system commonly called as Environment Management System (EMS) effectively addresses the needs of organizations worldwide by providing a common framework for managing environmental issues; they promise to effect a broadly based improvement in environmental management, which in turn can facilitate trade and improve environmental performance worldwide. It is a commitment to legal compliance and continual improvement. It helps in managing the business risks as it has a competitive advantage. It proves to be cost saving and helps to improve relationships with community and regulations.

Keeping this in mind, MCCIA has announced this training programme for EMS-Internal Auditor.

The training programme will provide both technical knowledge and practical skills essential to become EMS Internal Auditor and/or strengthen EMS Internal Auditor capacity for those already conducting such audits. It will cover clear and comprehensive understanding of fundamentals of EMS. Indian environmental legislation, clause-by-clause requirement of ISO 14001:2004 standard, methodology of audit and auditing skills/techniques as per ISO 19011:2002.
